(54) ELECTROLUMINESCENCE DISPLAY DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an EL display device capable of uniformizing the luminance of an EL display panel dispersed by the characteristics dispersion of a TFT for performing current control for making an EL element emit light and making defective picture elements inconspicuous.

SOLUTION: Display data are inputted to an EL display panel beforehand, all picture elements are lighted and the luminance of the respective picture elements at the time is measured. The average value of the luminance measured values of the respective picture elements is calculated, a difference from the average value is calculated further and the difference is stored in a correction information memory as a correction value. The correction value is added to the display data in an adder and inputted to the EL display panel.
